## EDUCATION

### AISSMS Institute of Information Technology

Pune, MH

*B.Tech in Artificial Intelligence & Data Science*

*Jun. 2023 – Jun 2027*

Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Generative AI, Database Management, Statistics & Probability, Big Data Analytics, Theory of Computation, Machine Learning Operations

## EXPERIENCE

### Tech Executive | [Link](#)

Dec 2025 – Present

*Catalyst Tech*

*AISSMS IOIT*

- Curated and validated labeled datasets for drone-based computer vision and object detection tasks.
- Performed preprocessing and quality checks to improve dataset consistency and reduce annotation errors.
- Worked with dataset specifications based on UAV flight requirements and hardware constraints.
- Annotated and segmented over 5,000 aerial images for computer vision model training.

### Web Developer - Freelance Project | [Link](#)

Jan 2026 – May 2026

*Calm Quest*

*Remote*

- Built and deployed a responsive meditation and wellness website for a practicing psychologist using React and Tailwind CSS.
- Worked closely with the client to understand requirements and designed a user-friendly interface with custom animations.
- Achieved near-perfect scores for performance (96), SEO (100) and accessibility (94) on Google Lighthouse.

## PROJECTS

### Rewind | *Generative AI, Interactive Timelines, Data Visualization, API* | [Link](#)

- Built an AI-powered web application that lets users explore historical events, music, culture, and technology from any year.
- Developed the frontend using Next.js, TypeScript, and Tailwind CSS with a retro-inspired interface.
- Integrated AI to generate historical summaries, compare different years, and visualize trends interactively.

### Study-OS | *LLM, RAG, Vector Database, EdTech* | [Link](#)

- Built StudyOS, an AI-powered study platform that combines note-taking, PDF Q&A, flashcards, and task management in one workspace.
- Added AI features such as note summarization, PDF question answering, flashcard generation, and task planning.
- Used LLMs, embeddings, and RAG to generate context-aware responses based on users' study materials.

### VoidInk | *NLP, BERT, Multi-Label Classification, Sentiment Analysis* | [Link](#)

- Built an NLP model using TF-IDF and BERT to classify multiple emotions in indie horror game reviews.
- Developed a web application that visualizes emotions from game reviews in real time using interactive charts.
- Deployed the application on Vercel with FastAPI-based inference APIs and interactive visualizations.

## TECHNICAL SKILLS

**Programming & Systems:** Python, R, SQL (MySQL), Git, Docker, GCP, VMs, Linux (Ubuntu), FastAPI, REST APIs

**ML/DL:** Computer Vision, NLP, Supervised & Unsupervised Learning, Clustering, Dimensionality Reduction, Anomaly Detection, EDA, Feature Engineering, Model Evaluation (Accuracy, Precision, Recall, F1, ROC-AUC), Cross-Validation, Hyperparameter Tuning, Ensemble Learning, Data Preprocessing, Classification & Regression

**Libraries:** NumPy, Pandas, Matplotlib, Seaborn, Plotly, SciPy, Scikit-learn, TensorFlow, Keras, PyTorch, Transformers, Hugging Face, Sentence Transformers, OpenCV, NLTK, spaCy, LangChain

**GenAI:** LangChain, RAG, OpenAI API, Gemini API, Google ADK, Ollama (Local LLMs), Vector Databases (FAISS, Chroma), Embeddings, Retrieval Pipelines, Prompt Engineering

## CERTIFICATIONS

- **Google AI Essentials** | *Prompt Engineering, Ethical AI, AI Tools Utilization, AI Skill Development* | [Link](#)
- **Google Data Analytics** | *Data Analysis, Data Preparation, Data Visualization, Data-Driven Decisions.* | [Link](#)
- **Oracle Agentic AI Foundation** | *AI Agents & Agent Reasoning, LangChain, Vector Search, Embeddings & RAG* | [Link](#)
